to hub (no VBUS)

speakers PH2.0

DESIGN NOTES (issue 2, claude/issues.md)

- P1: chumbilical. Pin numbers PROVISIONAL until the cable is beeped out.
- 5 V ONLY into the daughtercard DC jack. The original 12 V wall wart WILL FRY the Pi.
- J4/J5 carry data+GND only; P50V feeds both daughtercard USB jacks from the local 5 V rail.
- J2 mates Raspberry Pi header pins 17–26 1:1 (3V3, SPI0+CE0/CE1, 2x GND, GPIO24=bend, GPIO25=reset).
- Bend moves off FR3's GPIO17 -> gpio-key config change.
- HP_NOTIN placement still undecided; parked on the screw terminal.
